Memory load and reader depth: fixed E12-trained checkpoints, rank 32
Random oracle · M1-mixed
Factorized joint · M1-mixed
Candidate accuracy, hops 2–3 (%)
Reader updates L
Registered depth contrast: L4 minus L1
Depth effect on hops 2–3 (pp)
Stored facts E (chain layout also changes)
Evaluation load and chain lengths
E=6: (4,2)
E=12: (8,4)
E=18: (8,8,2)
E=24: (8,8,8)
E=36: (8,8,8,8,4)
C999 (evaluation seed 999001); equal means over seeds 17/29/43 and hops 2–3. The same checkpoint per seed is used at every load.
Top: absolute means, no supplied CIs; shaded training-depth range (sampled L=1, 2, 4). Bottom: committed 97.5% paired contrast CIs.
Load, chain layout and candidate count covary; this is not an isolated interference intervention.
