

C999003: test seed 999003; equal means over training seeds 17/29/43 and the stated hops. Curves: no supplied absolute CIs; callouts: existing 97.5% paired intervals.
RS/RS+J: 15,000 steps, sampled L = 4–8 (shaded). References: fixed L = 4 or mixed L = 1/2/4. All models: rank 32, shared-step M1.
RS+J penalizes the exact Jacobian spectral radius at reached z_L (gamma = 0.9, weight = 1); this is not a contraction or answer-correctness certificate.
Y scales differ by column, start at zero, and are shared across writers; long-hop panels are zoomed.
